

Investment Report

Annual Investment Report March, 2009.

Vivek Sood
Chief Financial Officer

Economy

The global economic conditions deteriorated sharply during the year 2008 with several advanced economies experiencing their sharpest declines. The associated adverse shocks spread across emerging market economies (EMEs) particularly by the fourth quarter of the year and accentuated the synchronized global slowdown. This interrupted the growth momentum of India, despite the strong dominance of domestic sources of growth. There was clear moderation in growth by the third quarter of 2008-09. In relation to the agricultural sector, industry and services sectors have been affected more by the adverse external shocks, with some contribution to their growth deceleration arising from cyclical slowdown in certain sectors after a prolonged phase of high

growth. The Central Statistical Organization (CSO)'s estimates (February 2009) of real GDP growth was placed at 5.3 per cent during the third quarter of 2008-09 as compared with 8.9 per cent during the corresponding quarter of the previous year, reflecting deceleration in growth of all its constituent sectors.

Inflation, as measured by year-on-year variations in the Wholesale Price Index (WPI), reached an intra-year peak of 12.91 per cent on August 02, 2008. Subsequently, it fell sharply to 0.26 per cent as at end-March 2009 and further to 0.18 per cent as on April 4, 2009.

During 2008-09, the combined finances of the Central and State Governments were adversely impacted due to the economic slowdown. The Central Government finances came under stress during 2008-09, both on the revenue and the expenditure sides, on account of fiscal measures taken to reduce inflationary pressures during the first half and to arrest the moderation of economic growth in the second half of the year. As a result, the key deficit indicators viz., revenue deficit and fiscal deficit widened to 4.4 per cent and 6.0 per cent, respectively, in the revised estimates for 2008-09 from 1.0 per cent and 2.5 per cent, respectively, in the budget estimates.

India's BoP position in 2008-09 (April-December) was characterized by a widened trade deficit leading to a higher current account and lower net capital inflows. The merchandise trade deficit further widened to US\$ 113.8 billion during April-February 2008-09 (US \$ 82.2 billion a year ago). The current account deficit widened to a level of US\$ 36.5 billion (US\$ 15.5 billion in April-December 2007).

As on April 10, 2009, the foreign exchange reserves stood at US \$ 253 billion, showing a decline of US\$ 56.7 billion (including valuation) over the level at end-March 2008.

Fixed Income Markets

The financial year 2008-09 was characterized by a significantly higher level of Central Government market borrowing than budgeted earlier, particularly during the second half of the year, in order to finance the expanding fiscal deficit in the wake of fiscal stimulus measures and various other committed expenditure of the Government.

This impact of high borrowing was reduced by following measures:

- (i) synchronizing OMO (purchase of government securities) with issuances of dated securities under the market borrowing calendar,

- (ii) buyback of securities issued under the MSS,
- (iii) amending the MoU on MSS in February 2009, allowing transfer from the MSS cash account to the normal cash account of the Government of India for financing of fiscal deficit, and
- (iv) purchase of government securities from the secondary market

Yields in the government securities market hardened during the 1st half on account of the heightened inflationary expectations in the face of sharp increase in global commodity prices and monetary policy responses – hikes in the CRR and the LAF repo rate. Yield reached the peak in September 2008 as liquidity conditions tightened in the wake of adverse developments in the international financial markets and advance tax outflows. Thereafter as a result sharp decline in WPI inflation along with easy monetary policy, the yields eased substantially till end-December 2008. The 10-year yield stood at 5.31 per cent as at end-December 2008, as compared with 8.63 per cent as at end-September 2008 and 7.93 per cent as at end-March 2008. Market sentiment worsened in the last quarter following the large and abrupt increase in the Government's market borrowing programme for 2008-09, at a time when the system had excess SLR investment amounting to around Rs.1,79,000 crore. The ten-year yield stood at 7.01 per cent as at end-March 2009.

During 2008-09, the yield on 5-year AAA-rated corporate bonds, witnessed a hardening trend up to October 2008 and began to soften thereafter. The yield has been inching up again since February 2009. The spread was 179 basis points on March 31, 2009 as compared to 312 basis points on December 31, 2008.

Equity Markets

The year 2008-09 continued to be a dismal year for the stock markets. As a reflection of the economic and financial market outlook, the year was characterized by depressed equity valuations. Equity price indices in most advanced economies were relatively flat during July and August 2008, but caught on the downward spiral subsequently. Beginning mid-September 2008, the Indian financial markets came under pressure owing to the knock-on effects of the global crisis through the monetary, financial, real and confidence channels. Though emerging market economies, including India, do not have direct or significant exposure to stressed financial instruments or troubled financial institutions, they are not immune to the adverse effects of the financial crisis. With sharp tightening of global liquidity, Indian banks and corporate saw their overseas financing drying up. The losses continued during the first two months of 2009 were mainly due to the downward trend in international equity markets on account of more than expected contraction of economic growth in the US, the UK, Japan and China pointing towards deepening of recession. Other factors that led to weak equity markets were heavy net sales by FIIs in the Indian equity market, slowdown in industrial and export growth, depreciation of the rupee against the US dollar, fall in ADR prices, lower than expected corporate earnings in the third quarter of 2008-09, revelations about financial irregularities in a particular information technology company and other sector and stock specific news.

In line with the behaviour of equity markets across the world, the Indian stock markets have been showing improvement since March 2009. The reasons for the improvement are announcement of the details of US\$ 1 trillion public private investment program by the US Treasury, some major US banks posting profits for the first two months of 2009, extension of the deadline for buyback of foreign currency convertible bonds (FCCBs) by the Reserve Bank to December 31, 2009, domestic consumer durable and capital goods output improving since January 2009, lower domestic inflation rate, strengthening of the rupee against the US dollar and net purchases by FIIs and mutual funds in domestic equity market.

The BSE Sensex and the S&P CNX Nifty closed at 9709 and 3021 at end-March 2009 registering losses of 37.9 per cent and 36.2 per cent, respectively, over end-March 2008

Sectoral performance: Most of the sectors witnessed sharp selling pressures during the year. The sectors like metal, consumer durables, capital goods and banking underperformed the sensex with the first three sectors falling more than 55%. The other sectors also fell but outperformed the broader indices mainly IT, oil and gas, auto, public sector undertakings, healthcare and fast moving consumer goods sector

Institutional volumes: Institutional volumes played an important role in determining market direction. V.61 According to the data released by the Securities and Exchange Board of India (SEBI), FIIs made net sales of Rs.48,249 crore (US \$ 12.0 billion) in the Indian equity market during 2008-09 as against net purchases of Rs.52,574 crore (US \$ 12.7 billion) during 2007-08. Mutual funds, on the other hand, made net purchases of Rs.6,985 crore during 2008-09 as compared with net purchases of Rs.15,775 crore in the previous year. The Indian equity markets have to a large extent has also been supported by the flows from the Insurance companies.

Fund Facts

The details are in the fund fact sheet which is attached.

Fixed Income Strategy: We have kept the portfolio duration between 3 and 4 with exposure bias towards corporate debt. Wholesale Price Inflation continues to be near zero and economic growth as reflected by IIP continues to indicate slow down, so RBI is expected to maintain easy monetary stance. The liquidity is abundant in the system. We plan to continue the duration between 3-4 and concentrate on corporate securities (non SLR) as credit spread is attractive.

Equity Strategy: Indian equity markets look attractive from a long term perspective. The current valuations are at fair levels. The fall in oil price and increased domestic production would reduce the risks for India and improve its longer term economic outlook. Despite the fall in the GDP growth rate, India would continue to be one of the fastest growing economies and this would draw a flow of capital, as when the risk appetite increases. However, with general elections and corporate earnings season round the corner, we expect the markets to be volatile and a clear direction to emerge thereafter.

We at Tata AIG follow a long-term strategy and believe that the opportunities provided by the dips will help us in generating wealth for our unit holders in the long run. We are quite positive about Indian economy and would recommend that the unit holders stay invested over the long term (10 years or more) for wealth creation.

Risks

Fixed Income

The key risks in the fixed income portfolio are:

Credit Risk: Bonds / debentures as well as other money market instruments issued by corporate run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit/ default risk in view of the sovereign status of the issuer.

To reduce risk of default we have the credit category allocation limit. With limit for maximum investment in each rating category.

All investments in corporate paper is with a minimum rating of AA and above.

Liquidity Risk: The Indian debt market is such that a large percentage of the total traded volumes on particular days are concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the fund may have to incur a significant "impact cost" while transacting large volumes in a particular security. The schemes will invest a higher proportion in liquid and traded debt instruments including Government Securities. The fund's investments are long term in nature and hence it is not required to maintain high level of liquidity. The fund keeps sufficient liquidity to ensure that it can manage interest rate risk in a reasonable manner.

Risk due to concentration: We diversify the portfolio to reduce the concentration risk. The initial list of investment lines and concentration limits for single corporate credits is also well defined. Industry / Sector exposure will be restricted at a % of the portfolio

Equity

The key risks in the equity portfolio are:

Risk of loss of value: Investments in equity and equity related securities involve a degree of risks and investors should not invest in Equity Schemes unless they can afford to take the risk of losing their investment.

Concentration Risk in equity:

- In order to ensure, that the portfolio is well diversified and to mitigate the risk of concentration, exposure to a single stock would be restricted to 10% of the value of the equity part of the portfolio at the time of purchase of the share.
- The exposure to a single stock may exceed the 10% limit due to market appreciation. However, as a discipline, any stock crossing 15% of the total portfolio value due to price appreciation would trigger partial profit booking so as to bring down the weightage.
- Exposure to a single sector cannot exceed 25% of the total value of the portfolio.
