

Fund Assure

Investment Report, May 2015

IN THIS POLICY, THE INVESTMENT RISK IN INVESTMENT PORTFOLIO IS BORNE BY THE POLICYHOLDER.

Dear Friends,

The month of May 2015 saw the benchmark index BSE Sensex and CNX Nifty gain 3.03% and 3.08% respectively. The Mid-cap index, CNX Mid-cap gained 3.87% during the same period.

On the global front, US GDP growth was revised downward to a negative 0.7% in the first quarter CY 2015 as against a positive 2.25% registered in the prior quarter. Exports, investment and government spending all weighed down on growth in the US economy, while consumption was positive. Sub-par economic data in the US has reduced the possibility of the near term lift-off in the interest rates by the US Federal reserve. Meanwhile, the Greece debt crisis continued to be an overhang on the global market sentiment even as the macro- economic indicators of major economies in the Euro zone started to pick up.

On the domestic front, the RBI, in its monetary policy review, reduced the repo rate by 25bps to 7.25%, on expected lines, on the back of contained inflation and subdued growth. The RBI revised the inflation projection a tad to around 6% by January 2016 and cut growth projection by 20bps to 7.6% for FY 2016.

The economic recovery in India was signaled by the robust GDP growth of 7.3% year on year in FY 2015 compared to 6.9% registered in the previous fiscal year. The GDP growth was weighed down by a muted growth in the agriculture sector at 0.2% but was well supported by manufacturing at 7.1% and services at 10.2%.

The near term overhang on the improving Indian macro outlook stemmed from the second-stage monsoon forecast released by Indian Meteorological department (IMD) at 88% of the long-period average (LPA), with a model error of $\pm 4\%$. The IMD forecasted a 66% probability of deficient monsoon along with a 27% probability of a sub-normal monsoon and just 7% probability of a normal monsoon. The muted estimates from IMD are largely due to a 90% chance of El Nino conditions during the monsoon season. If this forecast pans out, it will be the third crop season in a row to get adversely impacted by the vagaries of rainfall.

HSBC's India manufacturing PMI rose to a four month high in May to 52.6 as against 51.3 in April, as output and new orders inched up. However, there was a pick-up in inflation indicators as seen from an up-tick in both input and output prices.

The trade deficit in April was at USD 11 bn, with exports contracting 14% year on year due to weak global growth in the recent months. The imports contracted 7.5% year on year on the back of a sharp contraction of crude oil imports.

The government has contained the fiscal deficit in FY2015 to 4%, a tad lower than the revised estimate of 4.1%. While the gross tax collection growth in FY2015 at 9.3% was lower than the 9.9% in FY2015 revised estimate, the reduction in fiscal deficit came from the expenditure side with expenditure growth moderating to 4.3% from 7.8% in FY2015 revised estimate. Plan expenditure contracted to a negative 3.9% while non-plan expenditure growth was at 7.7%.

April CPI inflation softened further to 4.87% from 5.25% in the prior month, helped by lower food and beverages inflation at 5.4% as against 6.3% in March, partly on account of base effect. The deceleration in food inflation was seen across sub-groups aided by a sharp reduction in inflationary pressures in vegetables. April WPI inflation was at a negative 2.65%, registering the sixth consecutive negative inflation print.

We believe that the equity markets continue to offer the comfort of reasonable valuations for a long-term investor with a 3-5 year view.

Team Investment

Market Outlook - Debt

Fund Assure, Investment Report, May 2015

Debt market in the month of May 2015 saw the new benchmark 10 year Government security (G-sec) close the month at 7.64% levels. The erstwhile benchmark 10 year G-sec closed the month at 7.82% levels, easing by 4 bps from April levels. On the corporate bond side, the 10 year AAA corporate bonds closed the month at around 8.39% levels, hardening by 3 bps over the month.

The foreign portfolio investors (FPIs) have sold Indian debt to the tune of USD 1.4 bn in the month of May 2015. However, they have bought Indian debt to the tune of USD 6 bn in the first five months of the calendar year 2015.

In the month of May, the Indian debt markets continued to face headwinds such as the sub-par monsoon forecast from the Indian Meteorological Department (IMD), depreciation bias of the INR as well as hardening of the global bond yields.

The RBI, in its second Bi-monthly monetary policy review, reduced the repo rate by 25bps to 7.25%, on expected lines, on the back of contained inflation and subdued growth. The RBI explained that its rate action was in response to a favourable set of circumstances such as the banks starting to pass through some of the past rate cuts into their lending rates, headline inflation evolving along the projected path, moderate inflationary impact of unseasonal rains thus far, as well as the push back in the timing of normalization of US monetary policy. Additionally, low domestic capacity utilization, continued mixed indicators of recovery, and subdued investment and credit growth further contributed to the RBI's decision to reduce interest rates.

The RBI reiterated the key risks to inflation it had identified in the month of April. These were the IMD's sub-par southwest monsoon, firming up of crude oil prices amidst considerable volatility and geo-political risks as well as the volatility in the external environment. The RBI ideally would have preferred a conservative strategy to wait, especially for more certainty on both the monsoon outturn as well as the effects of government responses if the monsoon turns out to be weak. However, the still

weak investment scenario and the need to reduce supply constraints over the medium term to stay on the proposed disinflationary path of 4 % in early 2018 nudged the RBI to front-load a rate cut and then wait for data that clarify uncertainty.

The RBI guided that assuming reasonable food management; the CPI inflation was expected to be pulled down by base effects till August but start rising thereafter to about 6% by January 2016. The RBI stated that putting more weight on the IMD's monsoon projections than the more optimistic projections of private forecasters as well as accounting for the possible inflationary effects of the increases in the service tax rate to 14 %, the risk to the central trajectory of CPI inflation was tilted to the upside.

The RBI concluded that a strong food policy and food management would be important to help keep inflation and inflationary expectations contained over the near term. Moreover, they conceded that monetary easing could only create the enabling conditions for a fuller government policy thrust that hinged around a step up in public investment in several areas that could also crowd in private investment. They believed that this would be important to relieve supply constraints and aid disinflation over the medium term. The RBI noted that a targeted infusion of bank capital into scheduled public sector commercial banks, especially those that implemented concerted strategies to clean up stressed assets, was also warranted so that adequate credit flows to the productive sectors as investment picks up.

The bond markets expect the front loaded rate cut in RBI's second Bi-monthly policy to be followed by an extended pause as the RBI had limited space at this juncture to nudge the interest rates lower. Subsequent monetary policy would take cues from the onset and progress of the monsoon and the trajectory of the international crude oil prices, among other factors. Additionally, the government's policies to contain food inflation, especially if the monsoon is at sub-par levels as well as commentary on interest rate action from the US Federal Reserve would be other factors which would continue to determine the trajectory of yields in the Indian fixed income market in the near term.

Market Outlook - Equity

Fund Assure, Investment Report, May 2015

The month of May 2015 saw the benchmark index BSE Sensex and CNX Nifty gain 3.03% and 3.08% respectively. The Mid-cap index, CNX Mid-cap gained 3.87% during the same period.

The FIIs were net sellers with outflows of around USD 0.07 bn in the month of May 2015 and the DIIs were net buyers to the tune of USD 1.7 bn with insurance companies net buyers to the tune of USD 0.98 bn and domestic mutual funds, net buyers to the tune of USD 0.72 bn. FIIs have bought Indian equities to the tune of USD 7 bn in the first five months of the calendar year even as the DIIs have been net buyers of around USD 2.7 bn in the same period, with insurance companies selling around USD 0.65 bn even as domestic mutual funds bought around USD 3.3 bn.

The fourth quarter earnings disappointed with the aggregate earnings for the companies in the BSE Sensex contracting by 6.4% year on year as against the expectation of around 1% growth. The positive surprises in the earnings were concentrated in a few sectors. Robust results were seen from some private sector banks, which continued to deliver impressive performance on margins and asset quality as compared to the PSU banks. Other pockets of earnings strength were from telecom companies on the back of strong revenue growth in the data segment. Some investment linked sectors such as industrials and utilities surprised positively, albeit on extremely low expectations. Overall, the aggregate EBITDA margins for the companies in the BSE Sensex nudged lower by 50bps year on year as against estimates of an increase of 150 bps.

India's GDP growth in fiscal FY 2015 has rebounded to 7.3% but this does not seem to be reflected by high frequency indicators like auto production, PMIs, credit growth, exports etc. and has not percolated into corporate earnings as yet. Moreover, the rural demand has faced headwinds from muted increases in Minimum support prices (MSPs) of crops, unseasonal rains early this year impacting the Rabi (winter crop) output as well as the prospect of below normal south west monsoon affecting the Kharif (summer

crop) output. Additionally, the uptick in private sector capex is constrained by high levels of leverage in the infrastructure sector as well as elevated non-performing assets of PSU banks that have made them more risk averse to lend in the near term.

There are early signs of a sharp pick up in government spending this fiscal as the government expenditure in April 2015 was at 9% of the budgeted amount, highest in the last 18 years, indicating a front loading of government expenditure. Moreover, the quality of spending has been encouraging with a thrust in Plan expenditure, especially in the segments of roads and rural development.

On the legislative front, the budget session of the parliament concluded in May but the government could not ensure passage of the GST bill as well as the land acquisition bill as both the bills were referred to parliamentary committees in order to evolve a consensus on contentious clauses. The passage of GST bill and land acquisition bill in the monsoon session of the parliament would signal the determination of the government to pursue the reform agenda.

The market would like to see a concrete plan from the government to adequately capitalize the state owned banks to ensure sufficient funds to productive sectors of the economy. The government also needs to address the long pending issues plaguing the power distribution sector, particularly the finances of the state electricity boards so that the off take of the power generated can be improved. These measures, along with a robust plan to contain food inflation on the back of a possible deficient monsoon would help reduce supply bottlenecks and open up more space for the RBI to nudge interest rates lower in the medium term.

We believe that the equity markets continue to offer comfort of reasonable valuations for a long-term investor with a 3-5 year view.

ULIF 026 12/01/09 ITF 110

Fund Assure, Investment Report, May 2015

Fund Details

Investment Objective : The Top 50 fund will invest primarily in select stocks and equity linked instruments which are a part of Nifty 50 Index with a focus on generating long term capital appreciation. The fund will not replicate the index but aim to attain performance better than the performance of the Index. As a defensive strategy arising out of market conditions, the scheme may also invest in debt and money market instruments.

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safeguarding the investment during any downturn. The investment during any downturn.

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safeguarding the investment during any downturn. the investment during any downturn.

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safeguarding the investment during any downturn. the investment during any downturn.

Disclaimer

1. The fund is managed by Tata AIA Life Insurance Company Ltd. (hereinafter the "Company").
2. Past performance is not indicative of future performance. Returns are calculated on an absolute basis for a period of less than (or equal to) a year, with reinvestment of dividends (if any).
3. All investments made by the Company are subject to market risks. The Company does not guarantee any assured returns. The investment income and price may go down as well as up depending on several factors influencing the market.
4. Every effort is made to ensure that all information contained in this publication is accurate at the date of publication, but no responsibility or liability in respect of any error or omission is accepted by the Company.
5. Please know the associated risks and the applicable charges, from your Insurance agent or the Intermediary or policy document issued by the insurance company.
6. Various funds offered are the names of funds and do not, in any way, indicate the quality of the funds, their future prospects & returns.
7. Premium paid in ULIPs are subject to Investment risks associated with capital markets & the NAV of the units may go up or down based on the performance of the fund and factors influencing capital markets & the insured is responsible for his/her decision.
8. Whilst every care has been taken in the preparation of this document, it is subject to correction and markets may not perform in a similar fashion based on factors influencing the capital and debt markets; hence this review note does not individually confer any legal rights or duties.
9. Unit Linked Life Insurance products are different from traditional insurance products and are subject to risk factors.
10. Tata AIA Life Insurance Company Limited is only the name of the Insurance Company & any contract bearing the prefix 'Tata AIA Life' is only the name of the Unit Linked Life Insurance contract and does not in any way indicate the quality of the contract, its future prospects or returns.
11. Insurance is the subject matter of the solicitation.
