

FundAssure

Investment Report, February 2011

Dear Friends,

The month of February 2011 was dominated by global events in Middle East and North Africa, which saw the crude oil surge to uncomfortable levels. The Indian markets, concerned about the impact of rising crude oil prices on the economic growth, deficits and inflation, ended lower in February 2011. The benchmark indices BSE Sensex and CNX Nifty shed around 2.8 % and 3% respectively, while the mid-caps, as represented by the CNX Midcap index was down sharply by almost 7% in February 2011.

The Union Budget, presented on 28th February 2011 was broadly well received by the market as the finance minister performed a delicate balancing act between the twin objectives of growth and fiscal discipline. The budget was workmanlike and efficient focusing on laying a prudent economic management framework to improve outcomes, though short of big bold headline reforms. The finance minister clearly articulated the government's intent to introduce key financial bills in the parliament and work towards meeting the deadlines on Direct tax code (DTC) and the Goods & Services Tax (GST) as well as create an enabling framework to increase the FDI into the country. Overall, it was a budget that had no negative surprises and the Finance minister resisted the pressures of a populist budget, given the series of state elections in the near term, as well as avoided any major tinkering with the tax structures.

The railway budget sought to give impetus to Public Private Partnerships (PPP) in rail infra creation, stated robust plans to augment rail infrastructure and set aggressive targets for building new rail capacity. Rail safety and increase in number and connectivity of passenger trains received the railway minister's attention.

The third quarter GDP numbers were robust at 8.2%, marginally below the consensus of 8.6%. The GDP growth was powered by the agricultural sector, which grew by 8.9 % on a favorable base and a bountiful Kharif output. The manufacturing growth slowed down to 5.6% as indicated by recent muted IIP numbers, due to a high last year's base even as services sector continued to deliver as per expectations, growing at 8.7%.

The unrest in Libya has pushed oil prices to their highest level in more than two years. There are also concerns that a spreading of the unrest elsewhere in the Middle East could cause a supply bottleneck and fuel more global economic instability. The region accounts for 36% of oil reserves and such upheavals cannot inspire confidence to a benign oil price outlook.

With the Budget out of the way, the markets would be closely tracking the crude oil prices, which are the most unpredictable piece in the economic landscape. With the food inflation moderating, albeit still at elevated levels, a benign oil price scenario, though unlikely in the near term, is critical to meet the 7% inflation target by March 2011 and continue the lower trajectory into FY 2012.

The markets remain at fair value at less than 15 times FY 2012 earnings and present a favorable risk return ratio for a long term investor.

Market Outlook - Debt

FundAssure, Investment Report, February 2011

TATA
AIG
L I F E

A new look at life

The benchmark 10 year Government security rallied by around 14 bps in February to closed the month at 8.00%. The debt markets were enthused by the lower net borrowing number in the budget of Rs.3.43 lakh crores as well as an aggressive fiscal deficit target of 4.60% for FY 2012. The finance minister had also delivered a fiscal deficit number of 5.1% in FY 2011, an improvement over the target of 5.5%.

A lower borrowing number would not crowd the corporate out of the debt market and could keep a lid on the interest rates. Some sections of the market believe that there is a risk of slippage on the borrowing as the subsidies for food, fertilizer and crude seem to be under-provided in the budget. Nevertheless, the G-sec market rallied post budget, as the overall budget displayed fiscal prudence in ample measure.

The corporate bond yields were under pressure through February 2011 on the back of a tight liquidity environment, the negative liquidity ranging between Rs.70,000 crore and Rs.1 lakh crore. The 10 year Corporate AAA bond was trading at over 9% during February 2011 with the spreads widening from 80 bps to 100 bps during the month.

We would expect the tight liquidity to continue into March 2011, though a higher year end government spending could provide additional liquidity in the system. The advance tax outflow in March 2011 could offset the positive liquidity effects of government spending and keep the interest rates elevated, especially in the short

term. Short term CD breached 10% in February 2011 and is expected to remain in double digit in the near term due to the liquidity pressure.

Deposit growth has picked up in the recent fortnight to 16.9% year on year compared to 15.9% in the preceding fortnight. It still lags the credit growth by a margin. The credit to deposit ratio stands at 75.1% and the incremental credit to deposit ratio, which hit a high of 128% in December 2010 has been trending downwards and currently stands at 98%.

The inflation has remained sticky and clocked 8.23% for January 2011. It is widely expected that the RBI would increase the policy rates by 25 bps on March 17th 2011. High base effect and lowering food inflation could lower the headline inflation close to the RBI estimate of 7% by March 2011. The spike in crude oil can be a spoiler for the lower trajectory for inflation going forward and could deteriorate the current account deficit through higher import bill and the fiscal deficit through ballooning subsidy bill due to under-recoveries absorbed by the government.

The 10 year Government security has rallied to 8% in the month of February 2011 but would face significant pressure on the upside unless crude oil cools off to a meaningful extent. The 10 year Government security is expected to be in a range of 7.95%-8.15%, with risk on the upside in the near term.

Market Outlook - Equity

FundAssure, Investment Report, February 2011

TATA
AIG
L I F E

A new look at life

The Indian equity markets reacted to the sticky inflation and global events in the Middle East and North Africa with concern, even as crude surged to over USD 100 per barrel. The benchmark indices, BSE Sensex and CNX Nifty lost ground in February 2011 even as the mid cap index, CNX Midcap corrected by almost 7%.

FIIIs remained negative on inflation and were net sellers with net outflow of USD 1 billion in February 2011. Domestic mutual funds on the other hand were net buyers with inflows of USD 250 million during the month.

The Union Budget FY 2012 was well received by the market as the finance minister delivered a workmanlike efficient budget in difficult circumstances, managing to rein in fiscal deficit and still fuelling the economic growth engine. The rollback of post-Lehman stimulus on excise and service tax was expected but market was pleasantly surprised with the broad status quo on the indirect tax landscape. The market took the lower than expected borrowing and fiscal deficit number in its stride and reacted positively to the overall budget as it was going into the budget with very little expectations.

The budget permitted the SEBI registered mutual funds to accept subscription from foreign investors who meet KYC requirements for equity schemes as well as raised the FII limit for investment in corporate bonds issued in infrastructure sector by USD 20billion to USD 25 billion. Overall limit for FII investment in corporate bonds has thus been increased to USD 40billion.

The economic Survey for 2010-11, tabled in parliament by finance minister has pegged the economic growth at 8.6% for the current fiscal. The Indian economy is poised to register a growth of around 9% in 2011-12, despite risks of global events like volatility in commodity prices, according to the survey.

Final data on January 2011 trade indicate that exports continued to post healthy growth, rising 32.4% year on year vs. 36.4% last month. Moreover, growth in imports, which posted an 11% contraction in December 2010, also appears to have normalized to 13.1% year on year in January 2011. As a result, the trade deficit came in at the trend rate of USD 8 billion from USD 2.6billion in December 2010.

A robust agricultural growth on the back of the Kharif output and an acceptable level of growth in services have offset the tepid manufacturing growth in the third quarter of FY 2011 resulting in a GDP growth of 8.2%. We could expect the manufacturing growth to increase going forward and the IIP numbers to trend up as the high base effect wanes off, pegging the FY 2011 GDP at close to 8.6%. The GDP growth could be powered by the domestic consumption theme, which had accounted for more than 60% of the GDP in the third quarter of FY 2011.

Given the broad comfort in sustaining an 8% plus growth rate into FY 2012, we believe that the markets are fairly valued at less than 15 times FY 2012 earnings and offer an attractive entry point for a long term investor. While there could be volatility created by the sharp spikes in oil prices due to the crisis in the near term, the overall trajectory of Indian growth would not be derailed.

Disclaimer

1. The fund is managed by Tata AIG Life Insurance Company Ltd. (hereinafter the "Company").
2. Past performance is not indicative of future results. Returns are calculated on an absolute basis for a period of less than (or equal to) a year, with reinvestment of dividends (if any).
3. All investments made by the Company are subject to market risks. The Company does not guarantee any assured returns. The investment income and price may go down as well as up depending on several factors influencing the market.
4. Every effort is made to ensure that all information contained in this publication is accurate at the date of publication, but no responsibility or liability in respect of any error or omission is accepted by the Company.
5. Tax benefits are as per the Income Tax Act, 1961 and are subject to amendments made therein from time to time.
6. This material belongs to Tata AIG Life Insurance Company Ltd. Any unauthorised use, reprint or circulation is prohibited.
7. Please know the associated risks and the applicable charges from your Insurance agent or the intermediary or policy document of the Insurer.
8. Various funds offered under this contract are the names of funds and do not, in any way, indicate the quality of the plans, their future prospects & returns.
9. Premium paid in ULIPs are subject to Investment risks associated with capital markets & the NAV of the units may go up or down based on the performance of the fund and factors influencing capital markets & the insured is responsible for his/her decision.
10. ULIP products are different from traditional Life Insurance products and are subject to risk factors.
11. Interest Rate Sensitivity
Less than 3 year duration - Low
3 to 10 years duration - Medium
more than 10 years duration - High
12. Shading indicates the general representative nature of the portfolio to a particular style or cap".
13. Whilst every care has been taken in the preparation of this document, it is subject to correction and markets may not perform in a similar fashion based on factors influencing the capital and debt markets; hence this review note does not individually confer any legal rights or duties.
