

Fund Assure

Investment Report, September 2015

IN THIS POLICY, THE INVESTMENT RISK IN INVESTMENT PORTFOLIO IS BORNE BY THE POLICYHOLDER.

Dear Friends,

The month of September 2015 saw the benchmark index BSE Sensex and CNX Nifty shed 0.49% and 0.28% respectively. The Mid-cap index, CNX Mid-cap shed 0.57% during the same period.

On the global front, the US Federal reserve (Fed) in its September FOMC meet decided to keep interest rates unchanged, acknowledging the headwinds in the global economy, even as they reiterated the strength of the US economy. However, the US September non-farm payrolls were much weaker than market consensus. This muted jobs data has reduced the possibility of an October rate hike from the Fed given the Fed's focus on linking its actions to the incoming data. Most market watchers now expect the Fed to act in December provided US economic data shows sufficient improvement till then.

On the domestic front, the RBI in its fourth Bi monthly monetary policy on September 29th delivered a higher than expected repo rate cut of 50 bps. The RBI also marked down its FY2016 GDP forecast to 7.4% while it revised down its January 2016 CPI projection to 5.8%.

India manufacturing PMI fell to 51.2 in September from 52.3 in the prior month, as output and new order flows continued to soften on the back of weak export orders. However, both input and output prices ticked down indicating lower inflationary pressures.

The fiscal deficit in April-August 2015 was 66.5% of the FY2016 budget estimates (BE) with gross tax collections in this period growing 22.8%, higher than the 16% year on year growth estimated in FY2016 budget led by a surge in Indirect tax collections. Total expenditure increased 8.8% in April-August 2015 as compared to the same period prior year, with non-plan expenditure increasing 10.2% and plan expenditure increasing 5%. Cumulative fiscal deficit for the first five months of fiscal 2016 was lower than the 75% in the same period last year with the government reiterating its commitment to contain the fiscal deficit to the targeted 3.9% GDP in FY 2016. Factors such as lower fuel subsidies, higher service tax rate and increase in excise duty for petrol and diesel have contributed to improving the fiscal health of the economy even as the revenues from the disinvestment remain muted.

The Current account deficit for the first quarter FY 2016 widened to USD 6.2 bn at 1.2% of GDP from USD 1.5 bn at 0.3% of GDP in the prior quarter although lower than USD 7.8 bn at 1.6% of GDP in first quarter last fiscal. The net Foreign Direct Investment (FDI) was at USD10.2bn in the first quarter FY 2016, a tad higher than USD9.6 bn in the prior quarter. However, Foreign Portfolio Investment (FPI) witnessed a net outflow of USD2.5 bn in the first quarter FY 2016 compared to net inflow of USD12.5 bn in the prior quarter.

Rainfall for the monsoon season, June 1st to September 30th has been 14.3% below Long Period Average (LPA). Kharif (summer crop) sowing as of October 1st, 2015 was 1.3% higher than that of the same period last year with increase in sowing acreage seen in pulses, oilseeds and coarse cereals over the last year. Rice and sugarcane acreage were broadly similar to the prior year while the acreage under cotton was lower than last year. The Rabi (winter crop) could be under pressure due to lower reservoir levels which until September 30th has been around 23% below normal.

The Consumer Price Index (CPI) inflation for August 2015 came in at 3.7%, broadly in line with the market expectation of 3.6% as well as the 3.7% registered in the month of July. The WPI inflation for August 2015 came in at a negative 4.95% year on year, lower than market expectations, registering tenth straight month of negative WPI inflation print. The CPI and WPI inflation prints for the month of August continue to confirm the presence of disinflationary forces in the economy.

We believe that the equity market offers an attractive entry point for a long-term investor with a 3-5 year view

Market Outlook - Debt

Fund Assure, Investment Report, September 2015

Debt market in the month of September 2015 saw the benchmark 10 year Government security (G-sec) close the month at 7.54%, easing by 25 bps over the month. On the corporate bond side, the 10 year AAA corporate bond closed the month at around 8.19%, easing by 16 bps over the month.

In September 2015, the Foreign Portfolio Investors (FPIs) were marginal buyers of Indian debt to the extent of USD 57 mn, taking the overall purchase to USD 6.1 bn in the first six months of the current fiscal.

The RBI, in its fourth bi-monthly monetary policy review on September 29th, delivered an unexpected outsized rate cut while maintaining a dovish outlook on inflation and signaling continued accommodative monetary policy, which triggered a sharp rally in the Indian debt market. The RBI cut the policy repo rate by 50bps to 6.75%, higher than the market expectations of a 25bps cut.

The RBI noted that since its previous bi-monthly policy in August, inflation had dropped to a nine-month low and despite the monsoon deficiency, food inflation pressures had been contained by resolute actions by the government to manage supply. The RBI was satisfied that the disinflation had been broad-based and inflation excluding food and fuel had come off its recent peak in June.

The RBI observed that the fixed income markets had transmitted its past policy actions via commercial paper and corporate bonds, but expressed concern that the banks had done so only to a limited extent as their median base lending rates had fallen by only about 30 bps despite extremely easy liquidity conditions, 75 bps of the policy rate reduction during January-June period and lower bank deposit rates. The RBI intends to work with the government to ensure that impediments to the banks passing on the bulk of the cumulative 125 bps cut in the policy rate since January are removed.

On the inflation front, the RBI estimated CPI inflation to reach 5.8% in January 2016, a shade lower than its projection in the August bi-monthly policy. In the monetary policy statement of April 2015, the RBI had noted that it would strive to reach the mid-point of the inflation band of 4% by the end of fiscal 2018. Therefore, the RBI would now shift its target to bring inflation to around 5% by the end of fiscal 2017.

In this context, the RBI opined that the weakening global activity muting commodity prices, the still-low domestic industrial capacity utilization and the government's commitment to meet its fiscal targets and improve the quality of its spending would necessitate an accommodative monetary policy to the extent possible. The RBI stated that the investment is likely to respond more strongly if there is more certainty about the extent of monetary stimulus in the pipeline, even if transmission is slow. Therefore, the RBI had front-loaded policy action by a reduction in the policy rate by 50 bps. Given their year-ahead projections of inflation, this ensures one year expected treasury bill real interest rates of about 1.5-2%, which the RBI felt was appropriate for this stage of the recovery.

In a much awaited move, the RBI announced the framework for the Foreign Portfolio Investment (FPI) limits in the debt securities, which will henceforth be announced in INR terms. For central government securities, the limits will be increased in phased manner to 5% of the outstanding stock by March 2018, opening up room for additional investments to the tune of ₹1.2 tn by March 2018. Additionally, there will be a separate limit for investment by FPIs in the State Development Loans (SDLs), which would be increased in phases to reach 2% of the outstanding stock by March 2018, amounting to an additional limit of about ₹500 bn by March 2018.

The overall government borrowing for the second half FY 2016 remains on track with budget estimates, with the gross G-Sec borrowing at ₹2.34 tn, implying the annual G-Sec borrowing at a reduced ₹5.85 tn compared to FY2016BE of ₹6 tn. However, this reduction in G-sec borrowing will be offset by ₹150 bn worth of sovereign gold bonds, keeping the central government's total market borrowing for FY2016 unchanged. The weekly auction size of dated securities is ₹150 bn until mid-December followed by ₹140 bn for the rest of the period with the auctions spread over 16 weeks. The gross issuances are bunched in the 10-14-year bucket, which makes up 48% of the issuance.

The fixed income markets would take support from the RBI's rate cut as well as its dovish outlook while tracking the September CPI inflation print and the FOMC meeting of the US Fed in October for further cues. The opening up of the FPI limits is an added tailwind for the Indian debt markets in the medium term.

Market Outlook - Equity

Fund Assure, Investment Report, September 2015

The month of September 2015 saw the benchmark index BSE Sensex and CNX Nifty shed 0.49% and 0.28% respectively. The Mid-cap index, CNX Mid-cap shed 0.57% during the same period.

The FIIs were net sellers with outflows of around USD 0.87 bn in the month of September 2015 and the DIIs were net buyers to the tune of USD 1.57 bn with insurance companies net buyers to the tune of around USD 0.27 bn and domestic mutual funds, net buyers to the tune of USD 1.3 bn. FIIs have bought Indian equities to the tune of USD 3.4 bn in the first nine months of the calendar year even as the DIIs have been net buyers of around USD 8.2 bn in the same period, with insurance companies selling around USD 0.2 bn even as domestic mutual funds bought around USD 8.4 bn.

The month of September started on a tepid note with emerging market equities under pressure due to lingering concerns of an imminent rate hike by the US Federal Reserve (Fed). However, the markets were supported by the Fed's decision to keep rates unchanged even as strong Indian macro data, sustained executive action from the government to boost economic activity as well as the unexpected 50 bps rate cut delivered by the RBI helped lift the market sentiment towards the second half of the month.

The second quarter earnings season could see muted growth in corporate revenue on the back of weak demand environment and subdued prices, weighed down by sectors such as oil & gas and metals even as the export oriented sectors such as IT and Pharmaceuticals could benefit from a weaker INR. The corporate margins could be supported by lower input costs on the back of benign commodity prices. The banking sector could see some decline in fresh impairments as well as an improvement in treasury performance even as the loan growth and Net interest margins would remain under pressure.

In a move to provide some relief to the Indian steel industry aimed at moderating the flow of steel imports, which have risen sharply and forced steel price cuts in the domestic market, the Finance Ministry has approved the imposition of 20% provisional safeguard duty on certain hot rolled steel products. This is in line with the recommendation made by the Directorate General of Safeguards (DGS) and would be applicable for a period of 200 days.

The RBI granted 10 "in-principle" Small Finance Bank licenses with 8 out of the 10 licenses awarded to microfinance companies (MFIs). These banks will be subject to same CRR/SLR guidelines as commercial banks and will need to ensure that 75% of their loans classify as priority sector loans.

In a move to address the asset quality issues of the banks, the RBI has allowed the banks the freedom to convert debt to equity similar to Strategic Debt Restructuring (SDR) plan. This move will allow the banks to take greater control of the operations of their corporate borrowers.

There has been an increase in economic activity in the infrastructure sector where road project awards have seen a pickup in H1FY16, with the NHAI awarding more than ₹250bn worth of projects spread across 2,000km, with the award in the second half expected to be even higher. Moreover, there has been a recent surge in activity in the urban infrastructure space with the recent awards of contracts to the tune of ₹190bn for the Mumbai Metro.

Going forward, while global uncertainties will continue to shape the trajectory of the Indian equity markets, the markets would take further cues from the comments of the US Fed in its October FOMC meet. The RBI's dovish policy stance as well as its 50 bps rate cut in its bi-monthly monetary policy review could be a key enabler to catalyze the nascent investment cycle.

We believe that the equity market offers an attractive entry point for a long-term investor with a 3-5 year view.

Top 50 Fund

ULIF 026 12/01/09 ITF 110

Fund Assure, Investment Report, September 2015

Fund Details

Investment Objective : The Top 50 fund will invest primarily in select stocks and equity linked instruments which are a part of Nifty 50 Index with a focus on generating long term capital appreciation. The fund will not replicate the index but aim to attain performance better than the performance of the Index. As a defensive strategy arising out of market conditions, the scheme may also invest in debt and money market instruments.

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safeguarding the investment during any downturn, the investment during any downturn.

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safeguarding the investment during any downturn. the investment during any downturn.

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safeguarding the investment during any downturn. the investment during any downturn.

The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/ or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safeguarding the investment during any downturn.the investment during any downturn.
