Investment Report, March 2012

Dear Friends,

The month of March 2012 was an action packed month with the Union Budget and RBI monetary policy review setting the tone for the equity and debt market performance. The benchmark indices, BSE Sensex and CNX Nifty shed 1.96% and 1.66% respectively even as the Midcap index, CNX Midcap closed flat with a 0.08% gain for the month.

The Union Budget 2012-2013 was a sincere workman like document where the Finance Minister made an attempt to deliver a moderate fiscal consolidation by increasing indirect taxes, both excise and service tax from 10% to 12% and widening the service tax net (by introducing a negative list of services). These measures could rein in the fiscal deficit to an estimated 5.1% of the GDP in FY 2013 as against the revised FY 2012 estimate of 5.9% of the GDP. The fiscal deficit for FY 2013 requires a net market borrowing of ₹4.79 trillion, which was a tad higher than what the market was expecting and could potentially crowd out the private sector's funding needs as and when the investment cycle picks up.

Though the Union Budget has fallen short of any big ticket reforms, it is broadly seen as credible as the key assumptions on growth and projections on tax revenue appear realistic. There is an attempt to increase the falling tax to GDP ratio and a broad commitment to cap the subsidies at less than 2% of the GDP in FY 2013 and around the 1.7% levels in 3 years. The market was expecting more detailing of the concrete initiatives to achieve this subsidy curtailment roadmap.

The RBI in its Mid-quarter monetary Policy Review on March 15th 2012 decided to keep the cash reserve ratio (CRR) of scheduled banks unchanged at 4.75 % of their net demand and time liabilities; and keep the policy repo rate under the liquidity adjustment facility (LAF) unchanged at 8.5 %. The consensus among market analysts is moving to a possible cut in policy rates in April 17th policy review as the RBI would have firmed up its own estimate of GDP growth and inflation for FY2013. Going forward, the RBI would need to address the moderating economic activity and high real interest rates prevailing in the economy, as the high cost and scarcity of money act as serious headwinds to the economic growth trajectory.

The Wholesale Price Index (WPI) inflation for February 2012 came in at 6.95% marginally higher than both the consensus of 6.7% and the January 2012 WPI inflation print of 6.55%. The WPI inflation for December 2011 was revised upwards to 7.74% from the provisional 7.47%. We could expect WPI inflation to remain above the RBI's comfort zone of 5–5.5% in FY 2013 on the back of high global commodity prices and pressures from suppressed energy prices of petroleum products (there has not been any pass through in retail fuel prices even as crude oil has registered over 20% increase since mid-December), coal and electricity.

The Index of Industrial Production (IIP) in January 2012 clocked 6.8%, considerably above consensus of 2.1% and much higher than the December 2011 IIP growth of 1.8%, which has since been revised upwards to 2.5%. Though the IIP growth has surprised positively, it does not seem to reflect the moderating growth, clearly visible in the economy.

India has benefited from two successive years of normal and well distributed monsoon and in this regard the Indian Meteorological Department (IMD) 2012 monsoon forecast (normally due in April) would be closely watched. It will be a barometer in determining sentiment on domestic consumption, which has been the bulwark of the Indian GDP growth and can set inflation expectations in the medium term.

The equity market valuation is currently at around 13 times FY2013 earnings, at reasonable valuations and presents an attractive entry point for a long term investor with a 3-5 year view.

Saravana Kumar
Chief Investment Officer

The month of March 2012 saw the benchmark 10 year Government security (G-sec) hardening by around 37 basis points and closing the month at 8.57% levels. During the month, the G-secs was under pressure post announcements of the government borrowing quantum in FY 2013 in the Union budget , even though the RBI continued the purchase of Government securities through the Open market operations (OMOs). The RBI has purchased the G-sec's through OMOs to the tune of around ₹1.3 trillion (USD 25.4 billion) in FY 2012.

The corporate bond yield hardened by around 24 basis points in March 2012 and closed the month at 9.50% levels. As a consequence, the corporate bond spread over the 10 year G-sec stood at 70-80 bps, slightly lower than the February 2012 spread.

On the liquidity front, the Liquidity Adjustment Facility -LAF has emerged as a primary mode of liquidity injection ,maintaining an average shortfall of around ₹1.3-1.7 trillion during the month of March 2012 and reaching an all time high of around ₹1.95 trillion, even though the RBI enabled the infusion of primary liquidity of around ₹48,000 crore (USD 9.4 billion) in the system by effecting a CRR cut of 75 bps.

Despite some attempt at incremental fiscal consolidation in the Union budget, the fiscal policy makes the effectiveness of RBI's monetary stance more challenging. The market watchers are seeing risks on both revenue and spending targets, which could cause the fiscal deficit for FY 2013 to overshoot the government's target of 5.1%. The Budget pegged gross market borrowing by the government at ₹5.69 trillion (net borrowing: ₹4.79trillion), higher than the market expectations of around ₹5.2 trillion and even higher than the FY 2012 revised gross borrowing of ₹5.1trillion (net borrowing: ₹4.36 trillion).

The large quantum of weekly borrowings to the tune of ₹15000-18,000 crore in the first half of FY 2013 would keep the 10 year G-sec yields under pressure and could increase the risk of crowding out of the private sector. In the first half of FY 2013, the Central Government will borrow ₹3.7 trillion on a gross basis, completing around 65% of its gross borrowing program for FY2013. After taking into account redemptions during this time, net borrowing will be ₹2.84 trillion (63% of the full year borrowing), which would be nearly 50% higher than the net borrowing in FY2012.

Given the huge borrowing program, the RBI will need to continue its OMO operations into FY 2013 to prevent disruptive movement in G-Sec yields and manage the domestic liquidity situation. The actual timing of OMOs would factor in the Government borrowing program as well as the structural liquidity requirements due to the RBIs likely forex intervention

In the absence of the continued OMO support from the RBI, the G-sec yields will be under pressure due to increased supply on a weekly basis. The only near term positive for G-sec yields is the possible repo rate cut of 25 bps by the RBI on April 17th monetary policy review. Given the backdrop of a depreciating currency and persistently high oil prices ,there could be a limited cumulative easing of policy rates in FY 2013.

We expect the benchmark 10 year G-sec yields to remain under pressure and trade in a range of 8.50-8.80% in the near term and the continuation of OMOs as well as the commentary from the RBI in its monetary policy review along with the expected rate cut would be a key trigger in easing the bond yields in April 2012

Market Outlook - Equity

FundAssure, Investment Report, March 2012

L I F E

A new look at life

The benchmark indices, BSE Sensex and CNX Nifty shed 1.96 % and 1.66 % respectively even as the Midcap index, CNX Midcap closed flat with a 0.08% gain.

The FIIs remained net buyers in March 2012 bring in inflows of USD 1.80 billion even as DIIs continued to be net sellers of Indian equities-Insurance companies net sellers at USD 410 million and Domestic mutual funds net sellers at USD 280 million. For the quarter ending March 2012, the FIIs have bought Indian equities to the tune of around USD 9 billion.

In the near term, the Indian equity markets would be tracking the fourth quarter earnings season, which could see a decline in EBITDA margins of Indian corporate (ex banks and oil & gas) on a year on year basis, mainly on account of slower volume growth and rising cost of inputs, coupled with corporate India saddled with limited pricing power. At the net profit level, the pressure is expected to be even more acute as the net margins in Q4 FY12 are likely to decline even more sharply on a year on year basis due to increased interest costs. However, on a quarter-on-quarter basis, EBITDA margins would improve marginally.

The Union budget took some fledgling steps to revive the equity markets and broaden the equity participation. The Finance minister unveiled the Rajiv Gandhi Equity Saving Scheme, intending to allow for income tax deduction of 50 % to new retail investors, who invest up to ₹50,000 directly in equities and whose annual income is below ₹10 lakh. The scheme will have a lock-in period of 3 years and is expected to be operationalized in a few months.

In the Union budget, the Finance minister has provided a corpus of ₹15,880 crore for bank capitalization, to protect the financial health of Public Sector Banks and Financial Institutions and stated that he would examine the possibility of creating a financial holding company to raise resources to meet the capital requirements of PSU Banks.

With Infrastructure being the key thrust area of the Twelfth Plan period and investment in infrastructure expected to go up to ₹50 lakh crore, the private sector participation is key to the Infra creation (as private sector would need to fund 50% of the total investment). In the union budget, the Finance minister allowed Tax free bonds of ₹60,000 crore for financing infrastructure projects in 2012-13 and considered expanding the sectors eligible for Viability Gap Funding under the scheme "Support to PPP in infrastructure".

The Finance minister alluded to the National Manufacturing Policy announced with the objective to increase the share of manufacturing in GDP to 25% and create 10 crore jobs within a decade, in a bid to kick start the industrial growth.

The quality of fiscal deficit in the FY 2013 budget would be determined by the initiatives around containing the ballooning subsidies. In that context, the fuel price hike is critical to solving the issue of oil under-recoveries and avoiding a slippage in the government's budgeted fiscal deficit target of 5.1% in FY 2013. The scale of hike will send a key signal to the market watchers on the government's resolve to rationalize the subsidy bill. In an effort to target subsidies, the Finance minister in the Union Budget has focused on expanding the scope of the UID project by leveraging the initiative for direct transfer of kerosene and LPG subsidy through phase wise UID enablement. Similar efforts would be undertaken to effect the direct transfer of fertilizer subsidy to retailer and the farmer. The markets are bracing for a directional shift in the RBI's tightening trajectory and to that effect, the April 17th Monetary policy review may be crucial to understand the RBI's assessment on fiscal consolidation attempted in the Union budget as well as to determine the magnitude of rate cuts possible in FY 2013.

The equity markets are trading at around 13 times FY 2013 earnings and offer a reasonable entry point for a long term investor with 3-5 year view.

Disclaimer

1. The fund is managed by Tata AIG Life Insurance Company Ltd. (hereinafter the "Company").
2. Past performance is not indicative of future performance. Returns are calculated on an absolute basis for a period of less than (or equal to) a year, with reinvestment of dividends (if any).
3. All investments made by the Company are subject to market risks. The Company does not guarantee any assured returns. The investment income and price may go down as well as up depending on several factors influencing the market.
4. Every effort is made to ensure that all information contained in this publication is accurate at the date of publication, but no responsibility or liability in respect of any error or omission is accepted by the Company.
5. Tax benefits are as per the Income Tax Act, 1961 and are subject to amendments made therein from time to time.
6. Please know the associated risks and the applicable charges from your Insurance agent or the intermediary or policy document of the Insurer.
7. Various funds offered under this contract are the names of funds and do not, in any way, indicate the quality of the plans, their future prospects & returns.
8. Premium paid in ULIPs are subject to Investment risks associated with capital markets & the NAV of the units may go up or down based on the performance of the fund and factors influencing capital markets & the insured is responsible for his/her decision.
9. ULIP products are different from traditional Life Insurance products and are subject to risk factors.
10. Interest Rate Sensitivity
Less than 3 year duration - Low
3 to 10 years duration - Medium
more than 10 years duration - High
11. Shading indicates the general representative nature of the portfolio to a particular style or cap".
12. Whilst every care has been taken in the preparation of this document, it is subject to correction and markets may not perform in a similar fashion based on factors influencing the capital and debt markets; hence this review note does not individually confer any legal rights or duties.
