

Fund Assure

Investment Report, January 2014

IN THIS POLICY, THE INVESTMENT RISK IN INVESTMENT PORTFOLIO IS BORNE BY THE POLICYHOLDER.

Dear Friends,

The month of January 2014 saw the benchmark indices; BSE Sensex and CNX Nifty shed around 3.10% and 3.40% respectively, even as the Mid-cap index, CNX Mid-cap fell 6.58% during the same period.

On the global front, the month of January saw the return of risk-off sentiment in Emerging Markets (EM) with the increase in the possibility of contagion risks. The prospect of the continued QE taper from the US Federal Reserve (Fed) as well as the early signals of the slowing Chinese growth added pressure to the EM currencies leading to interest rate hikes in Turkey and South Africa and the currency devaluation in Argentina. Meanwhile, the Fed continued its QE taper in line with market expectations, by another USD10 bn, bringing the total monthly purchase pace down to USD 65 bn with no changes to their forward guidance.

On the domestic front, the RBI, in its third quarter review of the monetary policy, increased the policy repo rate by 25 bps from 7.75% to 8.00% as against the market expectation of a pause. However, the RBI opined that further policy tightening in the near term is not anticipated at this juncture if the inflation trajectory moves in line with baseline projections.

The RBI released guidelines for the corrective action plan on distressed assets in the economy that provided a framework for incentivising early identification of problem assets, timely restructuring of such accounts, and initiating speedy recovery or sale of unviable accounts. The creation of separate categories such as “Special Mention Accounts” and “Willful Defaulters” would expedite resolution of the NPL issue over the medium to longer term.

Activity in the Indian manufacturing sector showed an up tick in January as indicated by HSBC’s India manufacturing PMI print of 51.4 as against 50.7 in the prior month, led by an increase in output and new orders supported by an improvement in new export orders. As the orders and output picked up the manufacturers increased purchases and replenished the inventories of finished goods.

The concerns on the Indian macro-economy were visible as the fiscal deficit printed 95% of government’s budget estimate (BE) during the nine month period of April-December 2013, with the cumulative fiscal deficit standing at 4.6% of GDP as against the budget estimate of 4.8% of GDP for full year FY 2014. Market watchers expect a sharp compression in government spending over the January-March period to offset the shortfall in tax collections due to a moderating economy.

There was continued positive data on the external front as the trade deficit clocked an acceptable USD 10.1 bn in December 2013, led by an up tick in exports and a sharp contraction on the non-oil imports. Trade deficit for the April-December period in fiscal 2014 was at USD 110 bn, sharply lower than the USD 147 bn seen in the same period, prior year. The relatively moderate trade deficit augers well for the CAD in FY 2014 seen at 2.1% of the GDP as against the elevated 4.8% in the prior fiscal.

The Index of Industrial Production (IIP) for November 2013 came in at a negative 2.1% as against the market consensus of a growth of 0.8%. November IIP was the weakest IIP print in the last six months on the back of a dismal performance of the consumer durables segment. Going forward, the industrial recovery is expected to be gradual over the next few quarters on the back of a growth in exports as well as an up tick in rural consumption. The infrastructure output, comprising eight core sectors of the IIP grew 2.1% in December 2013, as against a growth of 1.7% in November and 7.5% in December 2012.

The Wholesale Price Index (WPI) inflation fell to a five month low of 6.16% in December 2013, well below the market consensus of 7.1% and significantly lower than the 7.5% print seen in the month of November 2013. The sharp fall in vegetable prices accounted for almost 100 bps of the decline in December WPI inflation.

In the month of January, the government hiked the number of subsidized cooking gas cylinder to 12 from 9 per annum, expected to result in an incremental annualized subsidy bill for LPG of around ₹ 50 bn. However, the OMCs proceeded with the customary monthly diesel price hike of 50 ps, despite the looming general elections. The current marked to market (MTM) loss in diesel stands at a six month low.

In the near term, we believe that global sentiment towards emerging markets as well as key domestic factors such as inflation and fiscal deficit will guide the trajectory of the capital markets even as the equity markets offer an attractive entry point for a long-term investor with a 3-5 year view.

Pension Schemes

Market Outlook - Debt

Fund Assure, Investment Report, January 2014

January 2014 saw the benchmark 10 year Government securities (G-sec) soften by around 7 bps during the month to 8.77% levels. The spread of 10 year G-sec over the 30 year G-sec was at 46 bps in January.

The corporate bonds remained in a tight range during January 2014 to close the month at around 9.63% levels in the 10 year bonds, similar to the December 2013 levels of 9.62%. As a consequence, the corporate bond spread over the benchmark 10 year G-sec stood at around 66 bps in January 2014, similar to the 59 bps in the prior month.

The RBI, in its third quarter review of monetary policy, increased the policy repo rate by 25 bps from 7.75 % to 8.00 % as against the market expectation of a pause. On the domestic front, the RBI noted the loss of momentum of growth in third quarter of 2013-14. The RBI was concerned that the Industrial activity remained in contractionary mode, mainly on account of manufacturing, which declined for the second month in succession during the third quarter. Moreover, the lead indicators of services suggested a subdued outlook, barring some pick-up in transport and communication activity.

The RBI stated that, while the retail CPI inflation declined significantly on account of the anticipated reduction in vegetable and fruit prices, it still remained elevated at near double digit levels. Inflation excluding food and fuel had also been high, especially with respect of services, indicative of wage pressures and other second round effects. The RBI was satisfied that the WPI headline inflation eased to a four-month low led by a sharp decline in vegetable and fruit prices. Core inflation, however, rose in December on an up tick in prices of chemicals, non-metallic minerals and paper products.

The RBI illustrated a “glide path” for disinflation, setting an objective of below 8% CPI inflation by January 2015 and below 6% CPI inflation by January 2016. The RBIs baseline projections indicated that over the ensuing 12 month horizon, with the current policy stance, there were upside risks to the

central forecast of 8%. The RBI believed that the increase in the policy rate by 25 bps will not only be consistent with the guidance given in the December mid-quarter review but also set the economy securely on the recommended disinflationary path.

The RBI summarized that the extent and direction of further policy steps will be data dependent, though if the disinflationary process evolved according to this baseline projection, further policy tightening in the near term was not anticipated at this juncture.

Dr. Urjit Patel committee of the RBI on the monetary policy had recommended a shift to flexible inflation targeting, with the headline CPI inflation as the nominal anchor. The committee also recommended that for effective monetary policy transmission, it would be necessary to develop a better interest rate framework, with most of the current interest rate distortion removed. The intention would be to develop the term repo market with RBI having a greater flexibility in managing the operative rate through its liquidity management tools.

The market watchers expect the government to indicate a lower fiscal deficit target of around 4.2% of GDP for FY 2015, in line with the amended FRBM rules. However, the gross market borrowing is expected to remain elevated on account of large redemption of government bonds of around ₹ 1.68 trillion due in FY 2015 and this would sustain pressure on G-sec yields over the next year.

Bond yields have remained at elevated levels, despite favourable inflation prints due to the overhang from the expert committee recommendations on the monetary policy as well as renewed emerging market risk-off sentiment. On the positive side, the lower G-sec supply due to culmination of the FY 2014 government bond auctions calendar as well as expectations of further softening of inflation due to moderating vegetable prices augur well for the bond market in the near term. The bond markets will be taking cues from the FY 2014 fiscal deficit print as well as the FY 2015 auction calendar in the medium term.

Market Outlook - Equity

Fund Assure, Investment Report, January 2014

The month of January 2014 saw the benchmark indices; BSE Sensex and CNX Nifty shed around 3.10% and 3.40% respectively, even as the Mid-cap index, CNX Mid-cap fell 6.58% during the same period.

FII flows were muted at near zero levels in the month of January 2014 even as the DIIs were net sellers to the tune of around USD 0.14 billion, with Insurance companies' net buyers of around USD 0.2 billion and domestic mutual funds, net sellers to the extent of around USD 0.34 billion over the same period. In the calendar year 2013, the FIIs had been net buyers to the tune of USD 20.1 billion with the DIIs net sellers to the tune of USD 13 billion, Insurance companies and mutual funds selling Indian equities to the tune of USD 9.2 billion and USD 3.8 billion respectively.

The third quarter fiscal 2014 saw FII inflows to the tune of USD 6.6 bn, raising the FII holding to around 23% as of December 2013, a new all-time high. In contrast, DII holding fell to 11.2% as of December 2013, lowest level since 2009, as they sold equities to the extent of USD 4.7 bn in the third quarter fiscal 2014. Consensus earnings estimates for the MSCI India were revised higher by 0.1% for FY 2014 (E) and FY 2015(E) to 9.5% and 18.5% for FY2014 (E) and FY2015 (E) respectively.

The month of January was a mixed bag for the Indian macro-economy as the growth indicators in the Indian economy remained soft even as the inflationary pressures moderated. The backdrop of a Chinese growth slowdown as well as RBI's unexpected rate hike weighed down Indian equity market sentiments in January even as continued QE tapering by the US Fed added further pressure on the EM equities and EM currencies.

The third quarter fiscal 2014 earnings season has

been muted thus far with IT and Private Banks reporting better than expected results even as PSU banks, FMCG, Consumer Discretionary and Auto sector have largely disappointed.

RBI's monthly credit deployment data of scheduled commercial banks for month ended December-2013 indicated muted growth in Non food credit at 14.8% year on year as against the elevated 18.2% year on year in September 2013. Services sector loan stood at 17.4% on a year on year basis led by an up tick in the trade segment even as agriculture and industrial sector saw muted credit growth. On a year on year basis, healthy credit growth was registered in the personal loans segment at 15.8% year on year led by a surge in home loans and auto loans. Double digit growth in the industrial segment was driven by Micro and small industries as well as key infrastructure sectors such as power and roads.

The government, in an effort to limit the fiscal deficit to the targeted 4.8% could focus on revenue increase through the sale of its SUUTI holdings, initiate stake sales in Hindustan Zinc and Balco and request special dividends from cash rich PSUs like Coal India and NMDC. However, a sharp contraction in the plan expenditure in the fourth quarter would be seen as negative for growth in the subsequent quarters.

The near term direction of the Indian equity market will depend on direction of FII flows given the backdrop of the continued QE taper and the EM risk-off sentiment. In the medium term, the electoral outcome of the Indian general elections as well as the economic policies of the new government will be a key determinant of the FII flows and consequently the trajectory of the Indian equity markets. We believe that the Indian equities offer an attractive entry point for a long term investor with a 3-5 year view.
