### Asset Allocation

# Quick Glance - Funds Performance

(Funds with AUM of more than ₹125 crores as on 30<sup>th</sup> April 2014)

## Whole Life Short Term Fixed Income Fund (ULIF 013 04/01/07 WLF 110)

## Guaranteed NAV Funds

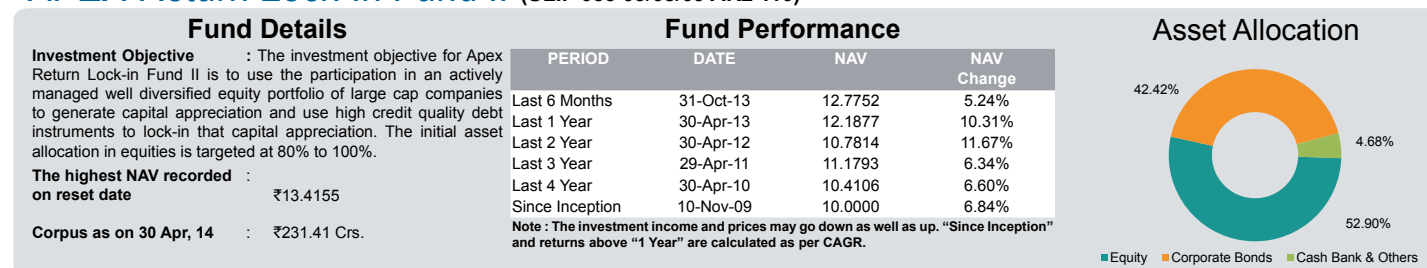

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Overtime, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, overtime. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safe-guarding the investment during any downturn.

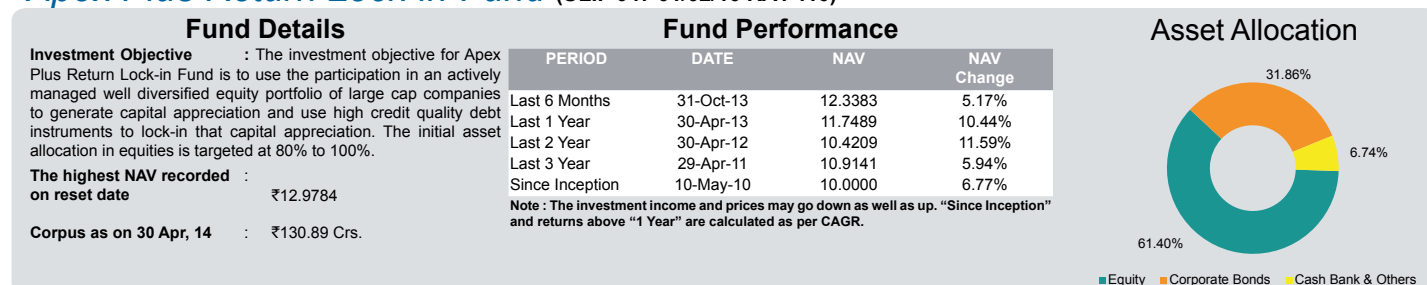

## APEX Return Lock-In Fund (ULIF 032 18/02/09 ARL 110)

## APEX Return Lock-In Fund II (ULIF 033 03/08/09 AR2 110)

## Apex Plus Return Lock-in-Fund (ULIF 047 01/02/10 RA1 110)

## Equity Outlook

The month of April 2014 saw the benchmark index BSE Sensex gain 0.14% even as the CNX Nifty shed around 0.12%. The Mid-cap index, CNX Mid-cap surged 1.99% during the same period.

FII's were net buyers with inflows of around USD 1.1 billion in the month of April 2014 and the DIIs were net sellers to the tune of around USD 1.1 billion, with Insurance companies' net sellers of around USD 0.5 billion and domestic mutual funds, net sellers to the extent of around USD 0.6 billion over the same period. In the first four months of the calendar year 2014, the FIIs had been net buyers to the tune of USD 5.3 billion with the DIIs net sellers to the tune of USD 3.6 billion, Insurance companies and mutual funds selling Indian equities to the tune of USD 1.8 billion each.

While the overall economy seems to have bottomed out, concerns remain on the possible impact on the FY 2015 GDP from the weak monsoons. A weak monsoon could affect both the supply and demand side of the GDP due to poor harvest and lower rural income apart from reviving inflationary pressures and reducing purchasing power.

# Quick Glance - Funds Performance

(Funds with AUM of more than ₹125 crores as on 30<sup>th</sup> April 2014)

There has been some easing of bottlenecks on the investment side, albeit at a modest pace, as seen from the acceleration in project clearances through the efforts of the Project monitoring group (PMG) as well as the removal of the ban on iron ore mining in Goa. A decisive election outcome would act as a catalyst to revive business sentiments and speed up the investment cycle. The pick up in business confidence is reflected in the rise of the NCEAR business confidence index in the fourth quarter of 2013. It is anticipated that the dedicated freight corridor project can be one big driver of the investment cycle, even though it has been proceeding behind schedule. Another driver of infrastructure spend could be the road sector which has seen the NHAI progressing steadily on land acquisition in FY 2014. NHAI expects to award around 5600 kms of road projects in FY 2015E with the majority of land acquisitions and approvals already in place.

In March 2014, non-food bank-credit growth came at 14.3% year on year, higher than 13.5% in the same month, prior year. The drivers of bank-credit growth were services, growing at 16% and accounting for 24% of the bank credit as well as retail, growing at 15.5% and accounting for 18.6% of bank credit. The industry segment contributed to 45.3% of bank credit and was the laggard in the bank credit growth.

India's petroleum product demand was at a 10 year low at 0.7% growth in FY 2014 as against the 10 year average of 4% largely due to the 1% decline in diesel demand. While the muted demand was led by higher prices of diesel and moderating domestic economic growth, the domestic production has not kept pace, resulting in higher import dependence. Sustained monthly diesel price hikes to eliminate under-recoveries, remunerative gas price for producers and a stable policy environment to encourage FDI in exploration segment are some of the initiatives needed to improve the health of the oil and gas sector.

India's macro situation has improved substantially over the last six months and the Indian equity markets have been the recipients of FII flows of USD 5.3 bn over the calendar year 2014, thus far. Many market watchers expect the FIIs to wait for the outcome of the Indian general elections before committing bulk of their allocations in Indian equities. We continue to believe that the Indian equities offer an attractive entry point for a long term investor with a 3-5 year view.

## Debt Outlook

April 2014 saw the benchmark 10 year Government securities (G-sec) harden by around 2 bps during the month to 8.83% levels. The spread of 10 year G-sec over the 30 year G-sec was at 27 bps in April 2014.

The corporate bonds eased during April 2014 to close the month at around 9.52% levels in the 10 year bonds, 8 bps lower than the March 2014 levels of 9.60%. As a consequence, the corporate bond spread over the 10 year G-sec was at around 50 bps in April 2014, lower than the 64 bps in the prior month. The fixed income markets traded in a tight range in the month of April, waiting for fresh cues, post the outcome of the general elections.

The Technical Advisory Committee (TAC) to the RBI was unanimous in its opinion on maintaining status quo in policy rates on the back of perceived upside risks to headline inflation in the near term. The members were overwhelmingly in favour of building up forex reserves to manage risks associated with capital outflows. Most members emphasized that the RBI's articulation of forward guidance was critical for interest-rate stability, while recognizing challenges related to the disinflation path set out for January 2016. On the global front, most members expect the US Federal Reserve to raise interest rate earlier than anticipated. On the domestic front, members felt that a pick-up in investment-led growth without commensurate increase in savings, could lead to larger macroeconomic imbalances.

The rating agency Moody's believes that India's GDP growth over the next two years would remain well below the peak achieved in the previous decade. It opined that three key factors that could positively shape India's sovereign credit profile were the effective addressal of the infrastructure and regulatory constraints on the country's long-term growth potential; curbing recurrent inflationary pressures effectively and reducing the fiscal deficit and consequently the debt burden of the government. Moody's summarized that an improvement in one of these three parameters could lead to improvements in others as well and that evolving trends in these three areas hold the key to India's sovereign credit profile.

Many market watchers believe that the RBI could go in for an extended pause on rates through 2014 as long as the CPI inflation follows the RBI's 'glide path'. They expect the RBI to look through transient shifts to the overall CPI inflation trajectory.

The RBI would closely monitor the factors that have the potential to distort the CPI inflation trajectory such as the impact of QE withdrawal on the INR and the global commodity prices, the evolving El Nino situation and its impact on the Indian agriculture, as well as the fiscal consolidation agenda of the new government, post the elections.

We continue to expect pressure on the bond yields from the relentless schedule of weekly borrowing of around ₹ 150 billion as well as from the RBI's continued anti-inflationary stance. As a consequence, interest rates would remain elevated for a prolonged period. The RBI's reluctance to inject liquidity through the Open market operation (OMO) route has remained a headwind for the Government securities over the last six months.

In the medium term, the Indian bond market would take cues from the budget presented in June 2014 and the fiscal policies of the new government post the general elections.
