Asset Allocation

Guaranteed NAV Funds

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, over time. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safe-guarding the investment during any downturn.

APEX Return Lock-In Fund (ULIF 032 18/02/09 ARL 110)

Fund Details

Investment Objective : The investment objective for Apex Return Lock-in Fund is to use the participation in an actively managed well diversified equity portfolio of large cap companies to generate capital appreciation and use high credit quality debt instruments to lock-in that capital appreciation. The initial asset allocation in equities is targeted at 80% to 100%.

Asset Allocation

Equity Outlook

The month of May 2013 saw the benchmark indices; BSE Sensex and CNX Nifty gain around 1.31% and 0.94% respectively, even as the Mid-cap index, CNX Mid-cap gained a modest 0.04% during the same period.

FII were net buyers with net inflow of around USD 3.6 billion in May 2013 even as the DIIs were net sellers to the tune of around USD 2.2 billion, with domestic mutual funds and Insurance companies net sellers of around USD 0.6 billion and USD 1.6 billion over the month. In the first five months of the calendar year 2013, the FIIs have been net buyers to the tune of USD 15.3 billion with the DIIs net sellers to the tune of USD 9 billion, Insurance companies and mutual funds selling Indian equities to the tune of USD 6.8 billion and USD 2.2 billion respectively.

Consensus earnings estimates for the broad market (MSCI India) were revised down by 1.5% and 1.3% for FY 2014(E) and FY 2015(E) over the month to a growth of 13% and 15% respectively.

S&P has maintained India's credit rating at BBB- with negative outlook. S&P forecasts India FY 2014 GDP at 6% and CAD at 4%. S&P has maintained the possibility of a 1 in 3 chance of India rating downgrade in the next 12-months. S&P expressed concern on the large fiscal deficit while taking comfort from the favourable demographic profile. They opined that the high fiscal deficits and a heavy government debt burden remained the most significant constraints on their sovereign ratings on India. They may revise the outlook to stable if the government carries through with its plans to revive public and private investments, implement a nationwide government sales tax and further trim fuel and fertilizer subsidies. They believe these measures could restore India's robust growth and contain public debt.

The CMIE capex data indicates a pickup in government projects under implementation as of March 2013 on a trailing four quarter basis even as the private sector remains subdued. However, new project inflows have registered a decline to levels worse than that seen during the credit crisis. A concerted effort to address supply side bottlenecks and structural constraints and ease financing constraints for corporate investment are needed to kick start the stalled capex cycle.

In a bid to fast track stalled projects, Cabinet Committee of Investments (CCI) has taken steps to resolve disputes within ministries,

Quick Glance - Funds Performance

(Funds with AUM of more than ₹125 crores as on 31st May 2013)

facilitate clearances to projects in key sectors such as oil & gas, power, mining and roads. Though it has a long way to go to make a significant difference to investor sentiment, this initiative has helped fast track existing projects and is widely seen as an important step in the right direction.

India's manufacturing PMI in May 2013 printed 50.1, the lowest level in 50 months. A positive momentum was seen in the export orders even as businesses struggled to meet orders as power outages hampered output. Another positive data point in the PMI in May was the benign inflation led by weaker commodity prices and reduced pricing power.

SEBI guidelines have made it mandatory for all private listed companies to have free float of at least 25% and the same is to be complied with by June 3, 2013. Public sector undertakings need to have a free float of at least 10% by August 8, 2013. Complying with these norms implies that around USD 2.0-2.5 billion of issuances need to get done over the next couple of months, higher than the average monthly run rate of USD 425 million secondary market issuance in FY 2013. In the near term, this excess supply could weigh down the market. The market offers the comfort of reasonable valuations at around 14 times one year forward price earnings, close to long term averages. We believe that the Indian equities offer an attractive entry point for a long term investor with a 3-5 year view.

Debt Outlook

May 2013 saw the erstwhile benchmark 10 year Government securities (G-sec) ease by 28 bps to close the month at 7.45% levels. The yields of the 30 year G-sec over the 10 year G-sec was at just 5 bps in May 2013 as against the 20bps, seen in the prior month.

The corporate bonds eased during the month of May 2013 in line with the G-sec market to close the month at around the 8.15% levels in the 5-10 year bonds, 40 Bps lower than the April levels of 8.55%. As a consequence, the corporate bond spread over the erstwhile benchmark 10 year G-sec stood at around 53 Bps in May 2013, contracting from 65 Bps in the prior month.

On the liquidity front, the Liquidity Adjustment Facility -LAF continued to be the primary mode of liquidity injection, maintaining a shortfall of around ₹0.9 trillion levels for most of the month largely due to muted deposit growth in the banking system.

India's FY 2013 GDP growth slowed to a decade low of 5% and may have registered a bottom. Going forward, we could see a gradual recovery in FY 2014 to 6% levels even as there are significant downside risks to this growth forecast. The consumption cycle remains strong aided by lower interest rates, pre-election spending and social welfare schemes but a meaningful recovery in investments is the key to a sustained revival in growth.

April 2013 WPI inflation print of 4.89% signals the easing of inflation across all major categories led by falling food inflation as well as benign core inflation enabled by softness in global commodity prices and declining pricing power of manufactures on account of the slowdown in domestic demand. The WPI inflation in fiscal 2012-13 has averaged 7.3% as against the elevated 9% in the prior fiscal. The RBIs monetary policy stance of keeping policy rates at elevated levels has worked in reducing demand and thereby reducing inflation. However, the upside risks to inflation could stem from a consumption recovery, pressures on the INR due to an elevated Current Account Deficit (CAD) as well as significant suppressed inflation in the economy.

Initial long-range forecasts expect normal monsoons; at levels around the long period average and this could catalyze further softening of food inflation in the months ahead and keep the headline WPI inflation close to the RBIs comfort zone.

A key macro risk is the elevated CAD and issues around funding it. While it is anticipated that the CAD as a percentage of GDP would fall in FY 2014, financing it would have to be through buoyant capital flows, which in turn depend on implementation of policy reforms and factors such as stable global financial markets and high risk appetite of FII investors. Any sudden stop or reversal in capital flows could result in increasing macro stability risks to fund this high CAD, resulting in a balance of payments stress in the near term.

The G-sec market has seen a sharp rally over the last two months due to a greater than expected drop in headline WPI inflation, accentuated by a fall in commodity prices. The market watchers believed that these would be favourable for India's macro, particularly the twin deficits and inflation and would open up space for the RBI to effect further cuts in repo rates. Going forward, the trajectory of the WPI and the retail CPI inflation as well as the extent of moderation of the CAD could determine the monetary policy stance and the possibility of nudging the repo rate lower.

In the near term, the G-sec market would wait for RBIs action in its mid-quarter monetary policy review on 17th June 2013 and take further cues from the RBI policy statement. The erstwhile 10 year benchmark G-sec would try to consolidate at 7.30-7.50% levels and the new ten year G-sec could trade lower at 7.10-7.25% levels.
