Asset Allocation

Guaranteed NAV Funds

The fund would be predominantly invested in equity at inception, wherein the dynamic asset allocation mechanism allocates the portfolio between equity and debt. This dynamic asset allocation is based on the performance of equity markets and movements in interest rates. The equity allocation may be reallocated to debt if the equity markets or interest rates fall, to safeguard the guarantee.

Over time, the asset mix will predominantly shift to debt to protect the guarantee. This dynamic asset allocation process will drive the returns generated by the Apex Return Lock-in Fund. The dynamic asset allocation shifts the allocation of the fund from an equity bias to a debt bias, over time. This would mean that the Guaranteed NAV would not mimic the highest level of the equity market, over the period the guarantee is applicable. Any unexpected and sharp falls in equity market and/or interest rates, during the period the guarantee is applicable, may trigger the allocation to completely move towards debt, to protect the highest NAV achieved prior to the fall. Overall, it is an ideal fund for an investor who wants to take advantage of high returns in a positive market scenario while safe-guarding the investment during any downturn.

APEX Return Lock-In Fund (ULIF 032 18/02/09 ARL 110)

Fund Details

Investment Objective : The investment objective for Apex Return Lock-in Fund is to use the participation in an actively managed well diversified equity portfolio of large cap companies to generate capital appreciation and use high credit quality debt instruments to lock-in that capital appreciation. The initial asset allocation in equities is targeted at 80% to 100%.

Equity Outlook

The month of October 2016 saw the benchmark indices S&P BSE Sensex and Nifty 50 gain around 0.3%. The Mid-cap index, Nifty Free Float Mid-cap 100 surged 2.8% during the same period. The FII's were net sellers to the tune of USD 0.75 bn in the month of October after being net buyers for the prior seven months.

The equity markets in the month of October saw favourable cues such as the RBI nudging the repo rate lower in its monetary policy review, sustained easing of inflationary pressures in India as indicated by the benign September CPI inflation print, US Fed's minutes reiterating a gradual increase in interest rates and the easing of regional geopolitical tensions. However, weak capex outlook as indicated by muted new projects announcements, tepid order books and low capacity utilization were negative cues.

Early trends indicate that the second quarter FY 2017 earnings season saw a positive earnings surprise in sectors such

Quick Glance - Funds Performance

(Funds with AUM of more than ₹125 crores as on 28th October 2016)

as energy and consumer discretionary while sectors such as financials and IT have largely delivered muted results thus far. Some companies in the consumer staples sector reported marginally weak results on lower volume growth but market watchers expect the recovery in their volume growth led by good monsoons, which should support rural demand.

The GST Council has proposed GST tax slabs for various goods and services at 0% for essential goods and services including some food items, 5% as threshold rate for goods such as textiles, 12% as a lower rate for goods and services, 18% as the standard GST rate, 28% as rate for luxury items including some consumer durables and additional cess above 28% for ultra-luxury items and demerit goods including luxury cars, SUVs, aerated drinks and tobacco products. Around 50% of the CPI basket is expected to fall in the 0% rate category even as most of the items in the CPI basket is likely to be taxed at a rate close to their current levels except for some services which could move to 18% tax bracket from the existing 15%.

The Centre will compensate states for any revenue loss for a period of 5 years from the revenues it generates largely due to the cess imposed on “sin” goods, where the difference between their current tax rate and the highest tax rate under GST of 28% will be charged in the form of a cess. Moreover the revenues from the clean energy cess will further augment the compensation pool.

The next steps in the GST implementation roadmap would be to pass the CGST and IGST bills in the winter session of Parliament, scheduled to start on November 16th and the SGST bill in state assemblies in their winter sessions. It is expected that the IT infrastructure will be in place in time for testing and integration of GST infrastructure so that the deadline of the April 1st 2017 rollout would be met. The GST is expected to result in meaningful efficiency benefits across sectors by streamlining the supply chain and improving the ease of compliance.

While the robust core sector print for the month of September indicates an uptick in economic activity, the Purchasing manager indices of manufacturing & services for the month of October signal a sustained momentum in the economy in the near term. The 7th central pay commission awards and a nascent revival in the rural demand on the back of better monsoon could support consumption growth. However, the recovery in the investment cycle would need a prolonged boost from the consumption demand which would then help absorb existing unutilized capacities. This trigger for a higher level of consumption demand could be from the states implementing their version of the 7th pay commission over the next fiscal.

Going forward, domestic factors such as a revival in earnings growth as well as global factors such as liquidity and central bank's policy action would shape the trajectory of the Indian equity markets. Given the improving macro-economic backdrop, we believe that the equity market offers a reasonable entry point for a long-term investor with a 3-5 year view.

Debt Outlook

Debt market in the month of October 2016 saw the benchmark 10 year Government security (G-sec) close the month at 6.89%, easing by 7bps over the month even as the 30 year G-sec hardened by 2 bps during the same period. The new 10-year G-sec closed the month at 6.79%, easing by 2 bps over the month. On the corporate bond side, the 10 year AAA corporate bond closed the month at around 7.51%, easing by 2 bps over the month. In the month of October, the Foreign Portfolio Investors (FPIs) turned sellers of Indian debt.

The minutes of the Monetary policy committee (MPC) of the RBI in October largely signaled a dovish outlook with members indicating abating near-term inflation risks amid tepid growth as the rationale for the 25 bps repo rate cut in the fourth bi-monthly monetary policy review of the RBI. The MPC expected inflationary pressures to largely remain contained going forward on the back of a good monsoon, low capacity utilization in manufacturing sector holding back corporate pricing power and the effective supply management measures by the government even as some members highlighted the need to be vigilant around the upturn in inflation. They noted that the economic activity remained subdued on weak private investments and trade, even though there were signs of a gradual recovery in growth which needed to be further supported.

The MPC noted that the liquidity conditions had remained comfortable in the near term, with the RBI absorbing liquidity on a net basis through variable rate reverse repo auctions of varying tenors. Simultaneously, the RBI has also been injecting liquidity through open market purchases in line with the system's requirements. The MPC observed that the weighted average call money rate (WACR) remained tightly aligned with the policy repo rate and, in fact, traded with a soft bias. Additionally, the interest rates on commercial paper (CP) and certificates of deposit (CD) had also eased.

The MPC minutes indicate that the October policy reflected a balancing act between inflation and growth even as the RBI still saw some upside risk to 5% inflation by March 2017. There could be further space for the RBI to nudge interest rates lower if the CPI inflation is contained especially if the MPC undertakes a flexible approach to inflation targeting and is comfortable with lower real interest rates in the economy.

The government announced repurchase of government securities worth ₹200 bn due to mature in the January-August 2017 period by the reverse auction process. This initiative will utilize the surplus cash balances of the government as well

(Funds with AUM of more than ₹125 crores as on 28th October 2016)

as lower the redemption pressures in the subsequent years.

We remain constructive on the fixed income market and believe that the sustained fall in the CPI inflation for the month of September as well as mitigation of inflationary pressures in food, especially pulses, opens up more space for the RBI to nudge the repo rate lower in the medium term, especially if the CPI inflation for the second half of fiscal FY 2017 undershoots the RBI's estimate of 5%. With FCNR outflows continuing and higher demand for currency in the festival season, market watchers expect RBI to undertake more open market purchases.

We continue to believe that the RBI's effort to speed up the monetary transmission in the banking system as well as keeping liquidity at near neutral levels on a sustained basis will remain an important factor for bringing down interest rates in the economy.
