Equity Outlook

The month of November 2016 saw the benchmark indices S&P BSE Sensex and Nifty 50 shed around 4.6% and 4.8% respectively. The Mid-cap index, Nifty Free Float Mid-cap 100 shed 5.9% during the same period. The FIIs were net sellers to the tune of USD 2.6 bn in the month of November while DIIs were net buyers to the tune of USD 2.7 bn with insurance companies net buyers to the tune of USD 0.8 bn and mutual funds net buyers to the tune of USD 1.9 bn.

In the month of November, the Indian equity markets had to grapple with the unexpected result in the US presidential elections, the demand slowdown concerns as a fallout of the "demonetization" of the ₹500 and ₹1000 notes in India as well as RBI's move to impose higher CRR on a temporary basis to mop up excess liquidity as well as forex outflows due to the redemption of FCNR deposits impacting the INR. A sustained fall in the retail inflation and an expectation that the demonetization would open up more monetary space for the RBI to nudge interest rates lower were positive factors supporting the equity market.

In a bid to accelerate India's shift towards a cashless economy, the government unveiled a slew of measures to encourage digital payments by a combination of monetary incentives, waivers of taxes and transaction fees. The government has sought to encourage cashless transactions for the purchase of fuel at retail outlets of state-owned companies, for rail tickets and monthly passes in suburban rail networks, the purchase of insurance policies and payments made to central government departments and public sector firms. The government is keen to improve the

Funds Available With Current Product Offerings

- A Snapshot (as on 30th November 2016)

eco-system to facilitate cashless transactions by addressing infrastructure bottlenecks, especially in rural areas.

The winter session of the Parliament saw the passage of amendments to the income tax law to usher in the new income disclosure scheme. A declarant can declare their undisclosed income by paying tax of 30%, penalty of 10% and a surcharge of 33%, all of which totals up to around 50%. In addition, the declarant will have to deposit 25% of undisclosed income in a zero-interest deposit scheme with the money to be utilized for developmental activities such as irrigation, housing, construction of toilets and infrastructure, primary education and primary health.

In a move to reduce the concentration of the bank's assets to a single counterparty or a group of connected counterparties, the RBI issued final norms for large exposure (LE's). As per the large exposure framework, a bank's exposure to a single counterparty cannot exceed 20% of the Tier1 capital at any time, which can be increased by 5% points under exceptional circumstances with board approval. Also, combined exposure to a group of connected counterparties shall not exceed 25% of a bank's Tier1 capital. The new limits will be applicable starting April 1st 2019.

The RBI has opined that the GDP growth outlook in the third quarter of fiscal 2017 was clouded by the still unfolding effects of the withdrawal of specified bank notes (SBNs). They noted the steady expansion in acreage under Rabi (winter crop) sowing across major crops compared to a year ago to build on the robust performance of agriculture in the second quarter fiscal 2017. They expected the withdrawal of SBNs to transiently interrupt some part of the industrial activity in November-December due to delays in payments of wages and purchases of inputs, although a fuller assessment was awaited. In the services sector, they opined that the outlook was mixed with construction, trade, transport, hotels and communication impacted by temporary SBN effects, while public administration, defence and other services continued to be buoyed by the 7th Central Pay Commission (CPC) award and one rank one pension (OROP). Moreover, the Gross value added (GVA) by financial services is expected to receive a short-term boost from the large inflow of low-cost deposits.

While the sharp fall in composite PMIs for the month of November, muted sale of two wheelers and tractors as well as the increasing inventory of passenger cars signals a near term slowdown in some sectors of the economy post demonetization, there is a distinct possibility that the fiscal stimulus expected in the Union budget FY 2018 would help kick start economic activity.

Going forward, these domestic factors as well as global liquidity and key central bank's policy action would shape the trajectory of the Indian equity markets. Given the positive impact of far reaching reforms on the macro economy in the long term, we believe that the equity market offers a reasonable entry point for a long-term investor with a 3-5 year view.

Debt Outlook

Debt market in the month of November 2016 saw the benchmark 10 year Government security (G-sec) close the month at 6.25%, easing by 54bps over the month even as the 30 year G-sec eased by 52 bps during the same period. On the corporate bond side, the 10 year AAA corporate bond closed the month at around 7.06%, easing by 45 bps over the month. In the month of November, the Foreign Portfolio Investors (FPIs) were sellers of Indian debt.

In its fifth Bi monthly monetary policy review, the Monetary Policy Committee (MPC) of the RBI decided to keep the policy repo rate under the liquidity adjustment facility (LAF) unchanged at 6.25%. The decision of the MPC was consistent with an accommodative stance of monetary policy in consonance with the objective of achieving CPI inflation at 5% by Q4 of FY 2016-17 and the medium-term target of 4% within a band of +/- 2%, while supporting growth.

The RBI stated that the outlook for Gross value added (GVA) growth for FY 2016-17 had turned uncertain after the unexpected loss of momentum by 50 bps in the second quarter and the effects of the withdrawal of specified bank notes (SBNs) which were still playing out. Incorporating the expected loss of growth momentum in Q3 and waning effects in Q4 alongside the boost to consumption demand from higher agricultural output and the implementation of the 7th CPC award, the RBI revised the GVA growth for FY 2016-17 down from 7.6% to 7.1%, with evenly balanced risks.

The MPC took note of the upturn in the prices of several items that was masked by the easing of inflation on base effects during October. Also, the OPEC's agreement to cut production could lead to firming up of crude prices in the coming months. The MPC opined that the global developments, especially as financial markets factor in the future stance of US monetary and fiscal policy, could impart volatility to the exchange rate thereby feeding into inflation. However, the withdrawal of SBNs could result in a possible temporary reduction in inflation of the order of 10-15 bps in the third quarter fiscal 2017. Taking these factors into account, headline inflation was projected at 5% in Q4 of 2016-17 by the RBI with risks tilted to the upside but lower than in the October policy review. The fuller effects of the house rent allowances under the 7th CPC award were yet to be assessed, pending implementation, and had not been reckoned in this baseline inflation path projected by the RBI.

The MPC noted that the bi-monthly review was set against the backdrop of heightened uncertainty such as the imminent tightening of monetary policy in the US triggering bouts of high volatility in financial markets and the possibility of the supply disruptions on account of the currency replacement dragging down growth this year. The MPC felt it important to analyze more information and experience before judging full effects of these factors before setting the monetary policy stance. RBI opined that if the impact was transient as widely expected, growth should rebound strongly. On the inflation front, the MPC was concerned about the sustained firmness and a pick-up in momentum of food prices other than vegetables. Additionally, they expressed caution regarding the downward inflexibility in core inflation which could set a resistance level for future downward movements in the headline inflation. Moreover, volatility in crude prices and the surge in financial market turbulence could put the inflation target for Q4 of FY 2016-17 at some risk.

Given these indicators of underlying inflation, the MPC decided to look through the transitory but unclear effects of the withdrawal of SBNs while setting the monetary policy stance. On balance, the MPC opined that it was prudent to wait and watch how these factors play out and impinge upon the outlook and accordingly, kept the policy repo rate on hold in this review, while retaining an accommodative policy stance.

After the withdrawal of the legal tender character of the ₹500 and ₹1000 denomination notes with effect from November 9th, 2016, there had been a surge in the deposits with the banks, providing significant increase of liquidity in the banking system. In order to facilitate liquidity management operations by the RBI, the government had, on the recommendation of the RBI, revised the ceiling for issue of securities under the Market Stabilization Scheme (MSS) to ₹6tn from ₹300bn earlier.

The Indian fixed income market has seen a stellar rally in the month of November, largely on the market expectation that the demonetization would open up ample space for the monetary policy action from the RBI. Subsequently, the monetary policy review has clarified that this expectation of the market was not justified as yet, since there were many moving parts to growth and inflation trajectory going forward. Nevertheless, many market experts still expect the CPI inflation to undershoot the RBI's projection of 5% by March 2017, opening up some space for the RBI to nudge the repo rate lower in the coming months.

We believe that the data points on growth and inflation in the coming months as well as the RBI's stance of keeping liquidity at near neutral levels on a sustained basis will remain important factors for bringing down interest rates in the economy.
